

Fast, Flexible, Secure Infrastructure When You Need It

Make infrastructure your competitive advantage with automated, interconnected bare metal-as-a-service.

On-demand infrastructure with the snap of a finger

The ever-growing volume and speed of global business data poses a constant challenge for digital businesses. For many, the cloud no longer meets their infrastructure requirements without resulting in higher latency, more costs and reduced efficiency. Transform that challenge into an advantage with Equinix Metal: interconnected global infrastructure available at software speed.

Equinix Metal delivers global, secure, interconnected, integrated, and on-demand infrastructure where and when it's needed. As part of Platform Equinix, digital businesses can deploy new services faster with hybrid public and private cloud infrastructure. Most importantly, Equinix Metal is ready to deploy in minutes, not months. No forced virtualization and no multi-tenancy means enhanced security.

Benefits of Equinix Metal

Higher Performance

Reduce time to market and reach users with high performance compute that can be deployed via popular developer tools.

Choice

Bring your own software and define most aspects of your infrastructure.

Interconnection

Access the most dynamic global ecosystem of nearly 10,000 companies, including all the clouds and networks in more than 55 regions.

Partners

Rich ecosystem of connectivity, software, integration and value-added service providers.

Security

Equinix Metal offers 100% dedicated single-tenancy, so you can isolate sensitive workloads and access hardware-level security protocols.

“By 2025, 75% of enterprise data will be created and processed outside a traditional datacenter or cloud.”

Gartner Research

EQUINIX

How it works

Equinix Metal provides lower latency to and from users on the digital edge: bare metal to cloud, bare metal to colocation and bare metal to internet. It's an ideal solution for digital businesses seeking to expand their global reach with a unified cloud and edge strategy without disrupting their business.

Users get:

Improved compute and network provisioning for growth markets

Equinix Metal helps unlock a company's global presence to help drive faster growth in new markets — without scaling up headcount.

Faster, neutral access to customers for hybrid cloud applications

Developer-friendly, fully automated infrastructure across a global footprint ensures faster, neutral access to customers and the networks they are part of, including major cloud platforms and wireless carriers.

Robust DevOps automation tools

Spin up infrastructure and network connections to cloud and network service providers in minutes with powerful API integration tools like Terraform and Ansible, native API libraries, hosted integrations or tie-ins with Kubernetes.

Omnipresence with customers in an IoT and 5G world

The present and future of digital commerce is on the edge, closer to the user. Equinix Metal provides the flexibility of compute-as-a-service with the higher performance of dedicated hardware.

Dedicated single tenancy for increased security

Equinix Metal provides 100% dedicated single-tenant infrastructure, so you can isolate sensitive workloads and access hardware-level security protocols. It provides secure, private connections to clouds, networks, partners and customers.

Key Capabilities

Rapid provisioning

It takes only minutes to set up and deploy a single service on Equinix Metal. A full end-to-end deployment can be up and running in an hour — so you can be faster-to-market with applications.

Expanded global reach

Discover and reach anyone on demand — cloud, sellers, partners, vendors, customers and employees — through one connection.

On-demand connectivity

Connect a database or application tier on any cloud, to another database or application tier in the cloud, and internal and external cloud services.

Interconnection services

Award-winning portfolio of physical and virtual interconnection services including the worldwide reach of Equinix Fabric™.

Securely connect and deploy

Enable a data center platform that brings users, networks, applications and cloud systems closer to your data.

Power Your Digital Leadership at Equinix

At Equinix, we believe digital infrastructure is your greatest source of competitive advantage. Digital leaders need one place to bring together and interconnect the foundational infrastructure to power their success. We are the world's digital infrastructure company and our trusted platform makes it happen.

Many businesses struggle with fragmented, complex infrastructure that spans private and public environments. They want one place to simplify and bring it all together.

We deliver a single global platform to create the foundational infrastructure to power your success. Place infrastructure wherever you need it. Connect to everything you need to succeed. Seize opportunity with agility, speed and confidence.
